

# Unlock your potential

Discover solutions for **low** and **medium** packaging volumes

For over four decades, Tommy Nielsen has been a respected supplier of high-quality medical packaging solutions to companies specializing in medical equipment and instruments. We focus on providing efficient solutions to manage low and medium volume batches often related to **research** and **development** processes.

## Full in-house control

Machines in our Universal range ensures you have a flexible production setup, handling the forming of packaging material, filling of your product, and sealing in one work cycle.

## One-stop shop approach

We provide not only machines, but also accessories, tooling and input materials, simplifying your packaging process and minimizing operational complexities.

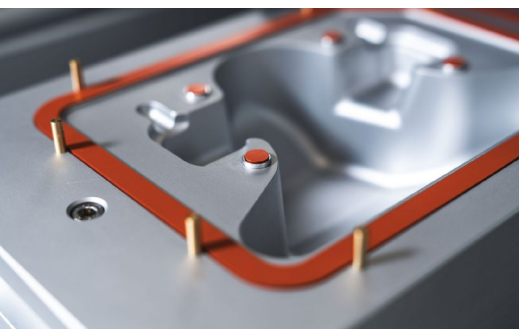

## Flexibility

In the developing phase you can quickly change your blister design at a very low cost, compared to any other blister packaging options available. And you will obtain a set-up with a 2-5 minutes fast changeover between different product types or variants.

## Key Benefits of Our Solution:

- **Short delivery lead time**  
Full solution available within 6 weeks.
- **Low machine and tooling investment**  
Only one machine needed for both forming and sealing blisters.  
  
Same machine, endless blister packaging designs
- **Low capital tie-up**  
Blister and sealing materials can be delivered in low quantities with short lead times.
- **Cleanroom facility at ISO8 level**  
Reduces or eliminates the need for cleaning materials before packing.
- **Cost-efficient preparation for FDA or other approvals.**  
Design flexibility allows for versatile packaging.
